

Established in 1992, **piCHEM** is a manufacturer of synthetic peptides and peptide related molecules for worldwide life science research. The company provides peptides and complex organic molecules for medical, biochemical and pharmaceutical research as well as full GMP service for peptides and peptide conjugates used as active pharmaceutical ingredients (APIs).

OPEN POSITION

Chemist for GMP large scale Peptide Production and Purification

The GMP Chemist will be responsible for handling large scale peptide synthesis and purification techniques under cGMP requirements and be accountable managing all phases of their assigned projects from concept through to release, ensure adequate prioritization, proper documentation and timely execution of the projects. This individual will work closely with QC, Sales and other areas in production.

General Responsibilities

- Performs large scale synthesis of peptides using state-of-the-art techniques.
- Preparative and process chromatography at industrial scale
- Recommends alternatives and suggestions to improve processes
- Maintains and troubleshoots instruments, equipment and general lab areas
- Manages resources according to project priorities
- Produces and maintain good written documentation of GMP projects
- Works closely with Quality Assurance/Quality Control and other departments to ensure that products meet the specification requirements

Requirements

- Ph.D. in organic chemistry or equivalent experience
- Strong peptide synthesis, purification and analysis background
- GMP experience
- Writing technical SOPs, Batch Production Records (BPR) and technical reports
- Work experience biotech/life science industry environment preferred
- Must be organized and detail oriented.
- Proficient in computer skills (MS Office, data analysis, ChemDraw, others).

If you are looking for a varied and challenging activity in a growing and highly dynamical environment then we are looking forward receiving your application.
